

Collaboration along the path to mutual value & ROI

Global Service Offering

Deploying Nautilus Platform across global shipping businesses and fleets requires:

1. Streamlined project management and installation capabilities
2. Worldwide local representation and territory expertise
3. Sophisticated network of global service providers

Join Nautilus's portfolio of global service providers commanding market presence and solving for client instrumentation, data collection or data transmission needs.

Connected Vessels

Dependable data retrieval requires an understanding of each vessel's IT stack and a solution that standardizes and transmits data from fragmented systems such as:

1. VDR, ECDIS, or other bridge technologies
2. Engine control, alarm monitoring, cargo management
3. IOT data from other sensors (Fuel Flow, Shaft Power, Draft, etc.)

Nautilus seeks open collaboration with any shipboard system to capture value from IOT data for our mutual clients.

Integrated Datasets

Nautilus's trusted data platform supports hundreds of integration points to bring datasets together from sources such as:

1. VMS, ERP, PMS and other third-party software systems
2. Weather routing providers and other value-add service providers
3. Market data sources, class society platforms, P&I reporting and other data-oriented stakeholders

Nautilus acts as a distribution channel for your data while our mutual clients benefit from Nautilus outputs to enhance business making.
